

## Hole Punching Equipment

Moving Web Hole Punching Equipment - QMI, Inc. is a world leader in moving plastic web hole-punching equipment design and manufacturing.

We produce the most reliable high-quality replacement parts and machines available in the Converting Industry.

### Viper PLC

- On Board Programmable Logic Control System
- Line Speed Following Capacity
- Easily programmed to punch any repeat or staggered pattern desired
- Input Signal for Bag Seam Indicator or Optical Reader
- Standard machine sizes from 30" to 120" widths
- Economical Alternative to PC Based Controls

### Viper CC

- Computer controlled programming technology
- Line speed following capacity
- PC based control to store on board over 50 punch patterns for instant Recall
- Complex pattern capability
- Input signal for bag seam indicator or optical reader
- Punch across a web with basic machine pattern widths from 30" to 120"

## Single Punch

- Economical High-Speed means of venting a web
- Available in both Pneumatic and Hammerblow versions
- Available in 4", 8", and 12" models.
